

# Snowflake Puzzle

To complete the puzzle you must **fill in each of the empty white hexagons**. There are two simple rules to follow:

1. **Surrounding each yellow hexagon there are six white hexagons, these must contain the numbers 1 through 6 (each number once and only once)**
2. **The number in each yellow hexagon is the sum of the numbers in the three white hexagons that point to it (with a black triangle).**
